

NEW ULTRA RUGGED ANDROID TAKES ENTERPRISE MOBILITY TO NEW LEVEL

The Power of Android in the Shell of a Tank

HORSHAM, PENNSYLVANIA, October 1, 2013 – Two Technologies is pleased to announce the introduction of the [N4](#); the first in a series of ultra-rugged Android™ devices designed for mobility applications in harsh weather and demanding environments. No longer will enterprise workers need to plan their work schedule around the weather. The N4 is the ideal data collection device for Public Safety, Asset Management, Field Service, Survey, Construction, Fleet Management, Point-of-Sale and more. This all-in-one device takes communications, data input, credit card transactions, photography and scanning to a higher level of in-field performance.

The N4 features a 5.5 inch diagonal high resolution 720 X 1280 Super AMOLED display, the powerful Android version 4.1.2 (Jelly Bean) as well as an unprecedented 70 Key, backlit keypad. Other key features include a hot-swappable battery, optional 3 channel magnetic stripe reader and an 8MP color camera. Information can be stored in the N4's 16GB internal memory and additional Micro SD memory is available up to 64GB. A drop-in cradle with spare battery charger may be used for desk-top or vehicle mounting. The device is IP67 rated and meets or exceeds MIL-STD 810G using methods 516.6 and method 514.6 for both shock and vibration.

With the N4, corporate branding can now be an integral part of a mobile solution. The N4 can be provided with or without a keypad and keys can be fully branded with application specific icons and text. The ultra-rugged polycarbonate housing can be provided in a multitude of colors to adhere to specific product or company colors. Company logo or product name can also be requested for the case exterior.
