

The single position cradle for the Safari™ provides a convenient method for charging the unit as well as allowing for communication with a PC or other devices via RS-232 or USB. (see connection port diagram)

The cradle also provides a charging bay for a spare battery, so you always have a battery ready to go!

The cradle can charge the battery in a Safari and a spare battery simultaneously. The LED indicator on the right side of the cradle will provide the charging status for the spare battery. When a battery is placed in the charging bay, the LED will light yellow to indicate that the battery is charging. When the charge cycle is complete, the LED will change to green. The battery may be left in the charging bay in this state to maintain a full charge on the battery.

Spare Battery Charging LED

CAUTION

- The cradle can only be used on a horizontal surface. It is not designed to be mounted on a wall.
- The cradle is NOT designed for use in a vehicle, and should not be used in this manner.
- For the power connection, only use the charger/adaptor that is supplied with the Safari unit, Two Technologies Part # 15764.
